The sheet we've shared contains records of text message outreach we've conducted over recent years on behalf of internal and external programs. Please analyze the data in line with the questions below.

Output format is up to you – a memo, charts, a dashboard, a spreadsheet, a notebook, or some combination. Use whatever best communicates what you find.

Using AI tools is fine. Use whatever you'd use on the job. We are looking for quick, high-quality analysis and judgment.

Logistics

Plan for about 2 hours. This will have been schedule-sent for the time you indicated as best; 2 hours later, please send an email to Nathan linking anything you've generated. Prioritize where you see juice to squeeze, and tell us what you'd do next (or ask for) with more time. If it's a better use of time to focus on a subset of the questions, that's fine.

Note:

- "Projects" have 1+ "waves," and "waves" have 1+ "parts." There may be more noise in "parts" data, e.g., rows representing tests, canceled sends, etc.
- Different projects have different goals, so metrics like "reply rate" will be more or less meaningful for individual projects (in ways that would be difficult for you to parse from the outside).

Questions

1. Is there anything you observe about the performance of our outreach on different vendors ("aggregators" in the data — Sinch and Syniverse specifically) that might affect our decisions about where to route our traffic?
    a. Any recommendations you'd make for changes or deeper investigations?
    b. Any differences by SMS vs. MMS or other key criteria?
2. Does anything jump out by department or "brand" (10DLC brands have a reputation and use a consistent set of send-from phone numbers) that we should be paying attention to?
3. Anything else jump out at you as a meaningful insight as we make programmatic decisions?
4. What additional data, instrumentation, coordination, or testing would you look for first? What would you do next?

After you've sent your work to nathanramia@movementlabs.com, please also send the following information about 3+ professional references (this doesn't have to be in the 2 hour window!):

- Name
- Phone Number and/or email

- LinkedIn (assuming they have one)
- How you know them
